

Project Initialization and Planning phase

DATE	29 September 2026
TEAM ID	SWTID-2026-1812
PROJECT NAME	Comic craft-Ai comic story creater using gemini modals
MAXIMUM MARKS	3 Marks

DEFINE PROBLEM STATEMENT

Customer Problem Statement

I am a beginner, student, or non-artist trying to create a comic from my creative idea, but I find it difficult to create the story, dialogues, illustrations, and comic layout using different tools, which makes the comic creation process time-consuming and difficult.

Customer

The target customers are **students, beginners, non-artists, and casual users** who are interested in creating comic stories but may not have advanced writing, drawing, or design skills.

Customer Need

Customers need a **simple and user-friendly platform** that can help them convert their creative ideas into a complete comic without requiring multiple tools or advanced technical skills.

Main Problems

- Difficulty in developing a structured comic story.
- Lack of illustration and drawing skills.
- Time required to create dialogues and narration.
- Need to use different tools for different comic creation activities.

- Difficulty in arranging the content into a final comic format.

Problem Impact

These challenges can make comic creation **time-consuming, complicated, and less accessible** for beginners and casual users. Some users may have creative ideas but may not be able to convert them into a complete comic.

Proposed Solution

ComicCraft is an AI-powered web application that simplifies the comic creation process. Users can enter a story prompt along with the **main character, setting, tone, and art style**. The system generates a structured comic story, narration, dialogue, and visual content, and presents the result as a comic preview with an option to download the final comic as a PDF.

Problem-to-Solution Flow

Creative Idea → Story Prompt → AI Story & Dialogue → AI Images → Comic Preview → PDF Output

Expected Benefit

ComicCraft provides an integrated workflow for comic creation, reducing manual effort and helping users transform their creative ideas into a complete comic in a simple and convenient way.
