

DATA FLOW DIAGRAM

DATE	29 September 2026
TEAM ID	SWTID-2026-1812
PROJECT NAME	Comic craft Ai comic story creator using gemini model
MAXIMUM MARKS	2 Marks

1. Introduction

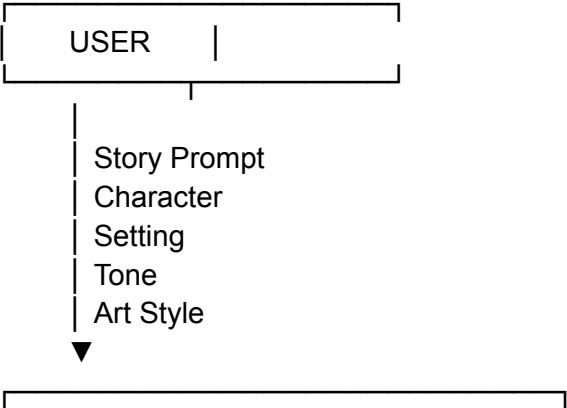

The Data Flow Diagram (DFD) represents how data moves through the **ComicCraft – AI Comic Story Creator** system. It explains the flow of information from the user's input to the final comic preview and PDF output.

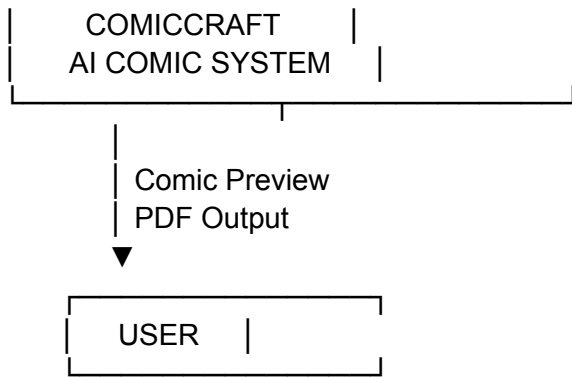

2. DFD – LEVEL 0

Level 0 provides a high-level view of the ComicCraft system. The complete application is represented as a single process.

Level 0 Flow

User → ComicCraft AI System → Generated Comic

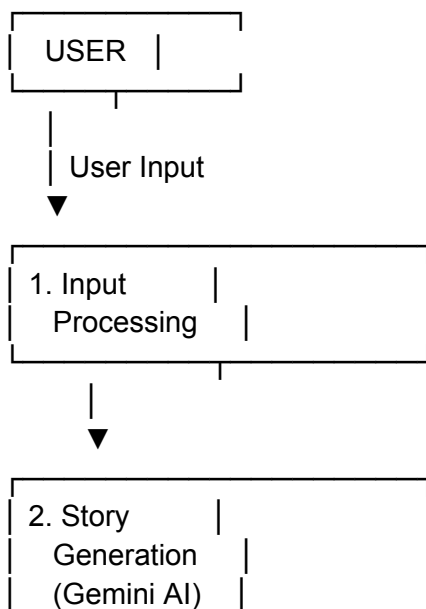

Level 0 Explanation

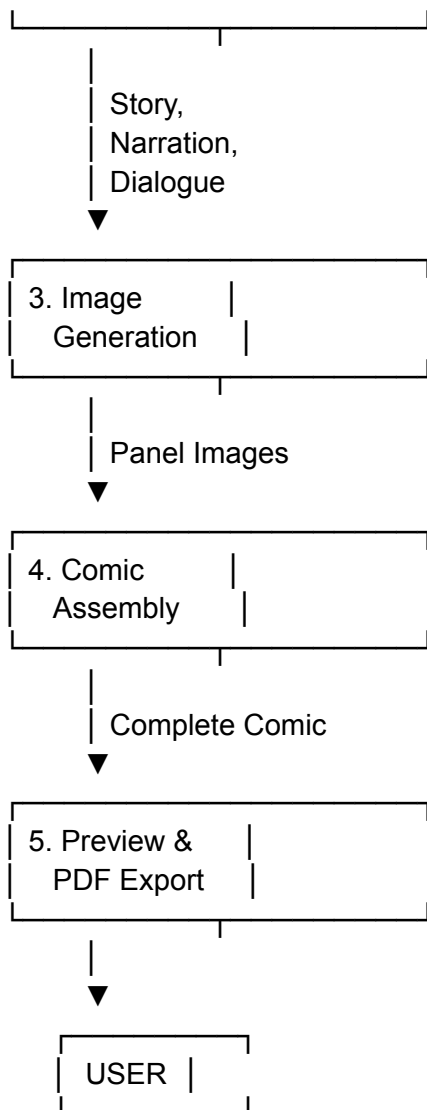

The user enters the required story information into the ComicCraft application. The system processes the given information using its AI-based components and generates comic content. The final comic is displayed as a preview and can also be exported as a PDF.

3. DFD – LEVEL 1

Level 1 provides a detailed view of the internal data flow of the ComicCraft system. The main system is divided into several processing stages.

Level 1 Flow

4. Level 1 Process Description

1. Input Processing:

The system receives the story prompt, character name, setting, tone, and art style from the user.

2. Story Generation:

Gemini AI processes the input and generates the story outline, narration, and dialogue for the comic panels.

3. Image Generation:

The image generation module creates suitable images for the comic panels based on the generated story content.

4. Comic Assembly:

The generated text and images are combined to create the complete comic.

5. Preview and PDF Export:

The completed comic is displayed in the preview page and can be exported as a downloadable PDF.

5. Overall Data Flow

User Input → Input Processing → Story Generation → Image Generation → Comic Assembly → Preview → PDF Output

The DFD demonstrates how ComicCraft transforms user-provided story information into a complete AI-generated comic through a sequence of connected processes.
